

A pre-start risk assessment is a process of identifying potential hazards and evaluating the risks associated with them before starting a specific task or activity. It is a systematic approach to identify, assess, and control hazards in the workplace, and is an important part of any safety management system. The assessment is designed to identify hazards, assess the risks associated with them, and recommend appropriate control measures to reduce the risks to a reasonable level. **Below are the risks associated with Water Wash:**

Check for:	Applicable? Y/N
Potential hazards associated with slips, trips, and falls, such as slippery surfaces and uneven ground.	
Potential hazards associated with pressure washing, such as the risk of chemical burns or inhalation of chemicals.	
Potential hazards associated with working at heights, such as falls from ladders or scaffolding.	
Potential hazards associated with electrical equipment, such as electrocution from faulty electrical wiring.	
Potential hazards associated with working in confined spaces, such as insufficient ventilation or exposure to hazardous gases.	
Potential hazards associated with manual handling, such as back injuries from lifting or carrying heavy objects.	
Potential hazards associated with working around hazardous materials, such as inhalation of noxious fumes or contact with hazardous chemicals.	
Potential hazards associated with working in extreme temperatures, such as heat exhaustion or hypothermia.	

		A	B	C	D	E
		Negligible	Minor	Moderate	Significant	Severe
